

### S-8016.C3

COVERED ARC WELDING ELECTRODE FOR 600MPa CLASS HIGH TENSILE STEEL & 1% Ni STEEL

**HYUNDAI WELDING CO., LTD.** 

Specification

AWS A5.5 E8016-C3

JIS Z3211 E5516-N2

EN ISO 2560-A E46 4 1Ni B 1 2

Applications

Welding of high tensile steel and 1% Ni steel used in machinery, pressure vessels, storage tanks for low temperature.

Characteristics on Usage

S-8016.C3 is low hydrogen type electrode for all position welding.

Good notch toughness of all-weld metal at low temperature is obtained because the weld metal contains about 1% Ni.

X-Ray performance and usability are good.

Note on Usage

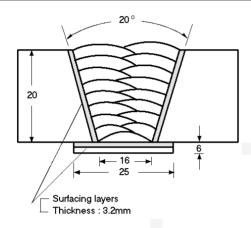

- 1. Dry the electrodes at  $350 \sim 400 \,^{\circ}\text{C}$  (662 $\sim 752 \,^{\circ}\text{F}$ ) for  $30 \sim 60$  minutes before use.
- 2. Adopt back step method or strike the arc on a small steel plate prepared for this particular purpose, because arc striking on base metal is in danger of initiating cracking.
- 3. Preheat at 80~100℃(176~212°F) before use. The temperature to be applied varies in accordance with plate thickness.

## Mechanical Properties & Chemical Compositions of all-Weld Metal

#### Welding Conditions

Method by AWS Rules

Diameter, mm(in) : 4.0 X 400(5/32 X 16)

Amp./ Volt. :  $170 / 25 \sim 26$ 

Interpass Temp. °C(°F) : 131~145(268~393)

Polarity : AC or DC +

[ Joint Preparation & Layer Details ]

#### Mechanical Properties of The Weld Metal

| Consumable |                     | Tensile test    | CVN Impact Value<br>J (ft·lbs) |             |  |
|------------|---------------------|-----------------|--------------------------------|-------------|--|
|            | YS<br>MPa (ksi)     | TS<br>MPa (ksi) | EL (%)                         | -40℃(-40°F) |  |
| S-8016.C3  | 520(75)             | 616(89)         | 30.8                           | 75(55)      |  |
